

Hi Charles,

Here are a few words you can use as you see fit, feel free to change names if I get them wrong.

With the recent cold spells we have been experiencing in South Africa, I had been stocking up on heaters to warm my house. This solution however only helped for the rooms in which had a heater and how close you were to that heater. I also have central air conditioning in the house, which again would warm the room but only for the time that the air conditioner was running. This obviously lead to expensive electricity bills!

I have since had the guys at Que Heating install ThermGuard ceiling insulation throughout the house. The results were almost instantaneous, that evening, after having the ThermGuard installed my wife and I both noticed a huge improvement in the general temperature of the house. Even in the rooms without heating in them! The insulation has been in for a week now, we are using fewer heaters and at a lower heat setting, this can only result in a lower electricity bill!

Another addition benefit we have noticed is how well the insulation blocks out outside noise, we have the occasional plane fly overhead which we used to notice and now we hardly hear them anymore. In short I can highly recommend this product to anyone looking to warm the house as well as save on heating costs! I have also been informed, by the guys from Que Heating, that it helps keep the house cooler in summer which again will reduce my air conditioning costs. Can't Wait. Thank you to Charles and your team for your swift, hassle free installation at my house.

Hope that helps, cheers.
