

**Thank you for choosing
Thermguard**
The most environmentally friendly
ceiling insulation that prevents the
transfer of heat or cold through
the ceiling by up to 92%.

INFORMATION FOR DIY MACHINE RENTAL

Installation machines can be rented from the Thermguard factory.

INSTALLATION

Installation of Thermguard insulation is quick and efficient. A team of two can easily install **300m²** in one day. A typical installation video can be viewed at www.thermguard.co.za.

General: two people are needed to install Thermguard – one to operate the machine and one to direct the hose. Downlights **must** be covered with downlight covers before installation commences. Dust masks should be worn.

Coverage: The recommended thickness will vary depending on the area you live in. In Johannesburg, the recommended insulation thickness is 135mm, while Pretoria is 115mm.

Table: bags per house

House size	20m ²			50m ²			100m ²			150m ²		
Thickness (mm)	100	115	135	100	115	135	100	115	135	100	115	135
Coverage (m ² /bag)	5.4	4.5	3.8	5.4	4.5	3.8	5.4	4.5	3.8	5.4	4.5	3.8
Bags required for job*	4	5	6	10	12	14	19	22	27	28	34	36

*Calculation: house size ÷ coverage = bags required (round up to nearest whole number)

Note: we recommend taking a few extra bags in case you accidentally install a thicker layer than intended. Unused bags may be returned if they are in the original condition.

TRANSPORTATION

The machine weighs approximately 60kg and each bag weighs 14kg. A Ford Ranger double cab with the tailgate down can transport a maximum of 25 bags together with the machine and hose. Rope is needed to secure the bags and machine. Using a trailer makes collection a lot easier.

PAYMENT

Full payment must be made upfront (including the refundable deposit). Payment is to be made by way of cash or EFT. **Card facilities are not available.**

COST (All prices quoted exclude VAT)
Cost per bag: R150.00
Rental
<ul style="list-style-type: none"> • R5,000.00 refundable deposit • R350 per day (Note: that if 20 or more bags are purchased, rental is free for 24 hours)
Water pipes in the ceiling space should be insulated to prevent freezing.
